SIGNGRAM BLUEPRINT

A Guide to Sign Language Grammar Writing

We gratefully acknowledge the financial support of the Horizon 2020 Framework Programme of the European Union

Current grammatical knowledge about particular sign languages is fragmentary and of varying reliability, and it appears scattered in scientific publications where the description is often intertwined with the analysis. In general, comprehensive grammars are a rarity. The SignGram Blueprint is an innovative tool for the grammar writer: a full-fledged guide to describing all components of the grammars of sign languages in a thorough and systematic way, and with the highest scientific standards.

The work builds on the existing knowledge in Descriptive Linguistics, but also on the insights from Theoretical Linguistics. It consists of two main parts running in parallel: the Checklist with all the grammatical features and phenomena the grammar writer can address, and the accompanying Manual with the relevant background information (definitions, methodological caveats, representative examples, tests, pointers to elicitation materials and bibliographical references). The areas covered are Phonology, Morphology, Lexicon, Syntax and Meaning. The Manual is endowed with hyperlinks that connect information across the work and with a pop-up glossary. The SignGram Blueprint will be a landmark for the description of sign language grammars in terms of quality and quantity.

Introduction: Letter to the grammar writer

The SignGram Blueprint is a tool designed to guide language specialists and linguists as they write a reference grammar of a sign language. This tool consists of two main components: the Checklist and the Manual.

The Checklist contains a list of linguistic constructions and phenomena that a sign language grammar should contain. Thus, it can be considered as a suggestion for the table of contents of the reference grammar to be written.

The Manual, on the other hand, guides the grammar writer in four ways, by providing:

- (i) basic, background information on the linguistic constructions and phenomena listed in the Checklist:
- (ii) guidelines on how to identify and analyze these grammar points;
- (iii) suggestions for data elicitation techniques and materials; and
- (iv) relevant bibliographic information that the grammar writer can consult during his/her research.

The Manual also contains a separate sub-component, the Glossary, which provides the definitions of certain linguistic terms used in the Manual.

In the following, we describe in more detail how the grammar writer can use the components of the Blueprint. However, before we move on to that, we would like to explain the context in which the Blueprint has been created, the reasons that lead us to think it is needed, and the choices we have made while writing it. We start by briefly discussing what grammar writing involves and then continue with describing the structure of the Blueprint in more detail.

Grammatical descriptions, why?

Sign language research has advanced rapidly over the past few decades, but it still faces an important stumbling block: the grammatical descriptions available for specific sign languages are incomplete and of varying reliability. Complete, thorough descriptions of sign languages are lacking, and this obviously has negative consequences – not only for the linguist studying a certain phenomenon (lack of knowledge about a certain undescribed aspect of the grammar might lead to a wrong characterization of a different, but related aspect), but also for a whole range of professionals who must rely on a comprehensive description of the language, such as sign language teachers of deaf children, trainers of sign language interpreters, teachers of sign language as a second language, clinicians involved in diagnosing language impairment and language pathologies, and speech therapists assessing language competence.

Writing a grammar may serve very different goals, but no matter what type of grammar is intended, the content should be as accurate and comprehensive as possible. The SignGram Blueprint is an attempt at helping the grammar writer achieve this goal. However, the form of the final grammar will, of course, depend directly on the goal that the grammar writer has set. A reference grammar of a language, which intends to be exhaustive, is a very different product, both in terms of depth and presentation, from a didactic grammar meant as a support for language learning. Therefore, the Blueprint must be considered as a tool that the grammar writer needs to adapt to his or her needs.

It should be kept in mind that the Blueprint can also be useful to describe partial aspects of grammar, for instance in graduate thesis projects, and thus does not need to be implemented in its entirety. Nevertheless, when a basic grammatical description of a language is lacking, it is sometimes hard to describe phenomena in isolation. Therefore, cooperative work should be encouraged to produce comprehensive grammatical descriptions of sign languages, which are very much needed.

How to use the Blueprint

As mentioned above, the Blueprint has two main components: the Manual and the Checklist. The Manual has seven parts. A part covering the Socio-historical background is followed by six parts corresponding to the major components of grammatical knowledge: Lexicon, Phonology, Morphology, Syntax, Semantics, and Pragmatics. Each part starts with an introductory chapter explaining the function of the linguistic component under investigation (e.g. Morphology), the organization of the part, and suggestions on how to use it.

Subsequent chapters and major sections within each part also contain introductory subsections providing background information including definitions, classifications, and suggestions on how to overcome the methodological and analytical challenges the grammar writer might face. The remaining subsections in each chapter contain guidelines for identification and analysis of the grammar points. These are often followed by a section on Elicitation Materials. This section contains methodology and material suggestions for data elicitation. Each chapter ends with a list of bibliographic references of the literature that addresses these grammar points – be it from a general perspective of for a specific sign language.

The aim of the Manual is to guide the grammar writer in providing the descriptions of the grammar points listed in the Checklist. To make this tool user-friendly, we have striven to maintain a one-to-one correspondence between (sub-)headings in the Checklist and (sub-)headings in the Manual. The grammar writer can read the Manual as if it were an independent book or she/he can click on a heading in the Checklist to access the relevant information in the Manual. To demonstrate how the Manual may provide guidelines for the identification of a specific construction or phenomenon,

AQ: This needs to be checked

let us give an example. The Morphology Part of the Checklist contains the heading '2.1.2.1. Noun-verb pairs'. This corresponds to the heading '2.1.2.1. Noun-verb pairs' in the Morphology Part of the Manual. In this subsection of the Manual, it is explained that a 'noun-verb pairs' heading in a reference grammar might be useful, since a morphological process by which action verbs can be derived from object nouns (say the verb SIT from the noun CHAIR) is attested in many sign languages. Representative examples of this morphological process from actual sign languages are given, and tests that can be used to distinguish the noun from the related verb are suggested. Finally, this subsection of the Manual contains the most relevant bibliographical references that deal with this phenomenon.

The Checklist and the Manual are offered as a suggestion and as a guide, but of course, it is up to the grammar writer to decide whether the relevant subsection makes sense in the grammar of the sign language he or she is describing. For example, if the morphological process by which verbs are derived from nouns is absent in that sign language, this section might be safely skipped. But if the grammar writer aims at putting his or her grammatical description in a typological perspective, he or she might opt to refer to the absence of such a process by contraposition to the languages that are mentioned to have it in the Manual. When developing the actual grammar for a given sign language, the grammar writer might want to depart from the structure proposed in the Checklist for a variety of reasons, both practical and conceptual. In fact, at various points of the Manual explicit suggestions are made for an alternative organization of the grammar.

In general, we expect that while the most general headings should be relevant for all sign languages (say, '1.2. Interrogatives' in the Syntax Part of the Checklist and the Manual), more specific sub-headings might be relevant only for a subset of sign languages. For example, '1.2.3.6. Split between the wh-sign and its restriction' is needed only for those sign languages in which an interrogative sign corresponding to 'which' can be separated from its restriction, say a noun like 'book'.

Also, note that the different parts of the Checklist and the Manual such as Syntax and Morphology are internally structured with an independent numeration. We hope that the independence of each part will help the grammar writer who might be interested in describing just a single component, say only the morphology or the syntax of the sign language studied.

Since we hope the Blueprint will be used by a wide range of language specialists, we have made an effort to keep the language as accessible as possible, and have tried to avoid technical, linguistic jargon. We have worked under the assumption that the 'grammar writer', who is the main target user of the Blueprint, does not need to be a professional linguist, although we assume familiarity with basic linguistic notions and grammatical concepts specific to sign languages. We also assume that he or she is acquainted with one or more sign languages.

The Blueprint is a product of several authors. However, we made all possible efforts to harmonize the style. For example, a potential source of confusion can be generated by the use of the term 'word' or 'sign' for the lexical unit of a sign language. As a rule of thumb, we used the term 'sign' except for linear order facts and some prosodic or morphological descriptions where the terms 'prosodic word', 'word order', and 'word-internal' will be used.

The Blueprint helps the reader with linguistic terminology in two ways: one is the Glossary. A number of linguistic terms in each section is automatically linked to the Glossary. The full list of glossary entries can also be found at the end of the Manual.

The other helpful tool is the cross-referencing between sections and parts of the Manual by means of hyperlinking. Typically, if there is a term/concept used in a section where it is mentioned but not described, a hyperlink connects it to the section where it is explained. In other cases, the section where one set of properties (for instance, syntactic properties) of a phenomenon is discussed is linked to another section where another set of properties (for instance, prosodic properties) are addressed. This will equip the grammar writer with a wider background knowledge on the topic and enable him/her to approach it from more than one angle if she/he intends to do so.

We mentioned that, in most cases, there is a one-to-one correspondence between the Checklist and the Manual. However, there are cases in which this correspondence does not hold. These cases are due to the fact that the Checklist contains only the list of linguistic features that should be described in a grammar. Therefore, the sections of the Manual that are more methodological in nature (typically, the introductory sections in chapters and major sections devoted to definitions, methodological and analytical challenges, elicitation materials, and references) do not have a correspondence in the Checklist. However, these methodological sections are numbered in a special way, so that they do not obstruct the parallel structures of the Checklist and the Manual.

The second area in which the one-to-one correspondence does not hold is due to a basic choice we made when we decided on the general design of the Blueprint. We believe that traditional grammars, even the most complete reference grammars available for better-studied spoken languages, tend to neglect the dimension of meaning. It is instructive in this regard to notice that in the average descriptive grammar, no comprehensive section is devoted to semantics and pragmatics; rather, the discussion of meaning aspects is usually distributed across sections describing formal aspects such as lexicon, morphology, or syntax.

We think that these traditional choices do not reflect recent linguistic achievements about the semantics and pragmatics of natural languages (spoken or signed). In addition, the traditional structure typically leads to a blending of formal and functional categories in the grammatical descriptions. One typical example is temporal categories. In many languages, the (formally unmarked) verbal present tense form is not only used to refer to the present but also to refer the future (and sometimes even to the past). Therefore, the grammatical category of tense must not be conflated with the semantic notion of tense. For this reason, we have devoted an entire part of the Blueprint to the elucidation of concepts related to meaning.

We present a couple of illustrative examples of why having fully developed Semantic and Pragmatics parts can be useful. The first still involves the 'tense' category. Some traditional grammars tend to conflate the discussion of tense and aspect, especially in languages in which the same morpheme express both a tense and an aspect specification. Unlike more traditional grammars, the Manual includes two sections in which these concepts are explained from a formal perspective and a meaning perspective. As the sections on tense and aspect are already present in the Morphology part (form) of the Checklist, in order to avoid a duplication, there is no Semantics part (meaning) in the Checklist, but the relevant semantic notions are displayed in the Semantics part of the Manual for the grammar writer as important background information for investigating their potential morphological realizations in the target language.

Similarly, a section called 'conditional clauses' is only present in the Syntax part of the Checklist describing possible formal aspects of such clauses. Nevertheless, the Manual contains a section in the Semantics part about the meaning of conditionals, since we think that a proper description of this construction cannot leave out the meaning dimension. However, other aspects of meaning, especially those related to pragmatic aspects of meaning such as discourse structure, figurative meaning, and communicative interaction, do have a counterpart in the Checklist, because it is justified to have them as free-standing sections in a descriptive grammar. Since all semantic concepts are also addressed from a formal perspective in the Lexicon, Morphology, and Syntax parts, the Checklist does not contain a part on Semantics. By contrast, the part on Pragmatics discusses aspects of meaning beyond the sentence level and is therefore included in the Checklist. With the general move to treat semantic and pragmatic aspects on an equal footing with other grammar components, we mean to boost description and analysis of semantic and pragmatic properties in signed languages, which have lagged behind until quite recently.

Methodological choices

We mentioned previously that we have adopted a plain, non-technical style, and that it is our hope that non-professional linguists will also be able to use the Blueprint. However, we must stress that this choice is not due to an anti-theoretical or anti-formalist attitude. On the contrary, the scientific directors of the Blueprint are all formal linguists who are convinced that no adequate empirical description is possible without the lens provided by modern linguistic theories. An a-theoretical description does not exist. What is considered a-theoretical is often a description that assumes commonsense, naïve conceptions, instead of more sophisticated notions from current linguistic theories that invariably help sharpen the empirical description. Therefore, the organization of the Checklist and the content of the Manual is implicitly theorydriven. Although the specific analyses that informed our choices are not at the center

of the stage, they can be retrieved by looking at the references that close each chapter of the Manual. This sometimes has a relative influence on the terminological choices made here (for instance, the term 'agreement verb' is used), but alternative denominations existing in the literature are also mentioned ('directional' or 'indicating verbs' for the example at hand).

A question that naturally arises when one projects a skeleton for sign language grammars is to what extent this should be similar to a grammar for spoken languages. The issue is tricky, even more so because no comprehensive reference grammar for any sign language exists yet. We have started from the assumption that sign languages are the products of the same language faculty that gave rise to spoken languages. So in principle, the main analytical categories that have been elaborated in the linguistic research on spoken language (for example, phonological features, verbal inflection, subordination, or implicature) and that have been fruitfully applied in spoken language research should be useful categories for sign languages as well. Thus, in those cases in which there is no sufficient information on how sign languages express a certain grammatical concept or construction, we referred to the findings on typologically diverse spoken languages, keeping in mind that if a certain linguistic phenomenon or construction has been observed in a group of spoken languages, it has the potential to be observed in the sign language studied.

Such transfer from the generalizations on spoken languages is undoubtedly useful; however, it is not sufficient. It is also very well known that the visuo-spatial modality does shape the way language is expressed, and new, modality-specific categories should at times be employed to describe sign language phenomena (for example, non-manual marking, classifier predicates, and role-shift). It is an open question whether these categories are really unique to the signed modality or correspond to mechanisms that are present in spoken languages, albeit in a less prominent form, thus having led to their exclusion from spoken language grammars. These types of questions are very important, but the Blueprint is not the place to find answers to them, since our goal is to offer adequate descriptive tools rather than to investigate the underlying issues. Thorough descriptive work on many more sign languages will hopefully contribute to (partially) answering those questions at some point by relying on more solid empirical ground. A separate issue concerns iconicity. The fact that some signs incorporate iconic features has consequences for the structure of the grammar at all levels. However, the effects of iconicity are not the same in the lexicon and in syntax, for instance. Thus, rather than having an independent section on iconicity, we decided to discuss its effects whenever they are immediately relevant for a specific aspect of the grammar or a grammatical phenomenon.

At first sight, the Checklist may look superficially similar to the table of contents of a reference grammar of a spoken language. However, we would like to stress that a category identified in spoken language may involve different exponents and linguistic processes in sign language. The Manual contains multiple examples of this where such differences are highlighted and explained in detail. For example, while compound is a standard grammatical concept in morphology and is found in the Checklist, its application to sign languages raises some non-trivial questions. One is how to analyze compounds with multiple articulators that work in parallel and relatively independently from each other, for example, those in which one hand articulates (part of) one sign while the other one simultaneously articulates (part of) another sign.

As a final note on the Manual, we would like to point out that the current state of the art in sign language research has had some effect on the varying degree of detail across chapters and sections. Where necessary, we have tried to compensate for the existing gaps on the basis of the available linguistic information on spoken languages, as mentioned above. The grammar writer interested in further deepening his or her grammatical knowledge is encouraged to consult the selection of bibliographic pointers included at the ends of sections and chapters.

In some cases, original research has been conducted specifically for the preparation of the Blueprint, since the phenomenon to be described had not been explored at all for sign languages. In these cases, the original findings are the starting point for the relevant section. This is the case, for instance, in the section on imperatives in the Syntax part.

The Blueprint and the SignGram COST Action

The Blueprint is the main product of the SignGram COST Action (Action IS1006 "Unraveling the grammars of European sign languages: pathways to full citizenship of deaf signers and to the protection of their linguistic heritage", website: http://signgram. eu). COST is a European network of nationally funded research activities which aims to promote and finance cooperative scientific projects with a specific goal. The SignGram COST Action started in 2011 and ended in 2015; its main goal was the creation of the Blueprint. Researchers from 13 COST countries (Austria, Denmark, France, Germany, Greece, Iceland, Italy, Netherlands, Norway, Poland, Spain, Turkey, and the United Kingdom) and two COST International Partner Countries (Argentina and Australia) took part in the Action. COST funded the following scientific activities: the meetings in which the design of the Blueprint was discussed and decided, scientific missions between the partners, and summer schools for junior researchers who want to start working in the sign language field, as well as four editions of a conference that has become a major venue for sign language researchers (FEAST, Formal and Experimental Advances in Sign Language Theory). Another activity promoted by the SignGram Action is the creation of a repository of materials that have been used for the elicitation of signs or structures by researchers in Europe and beyond. The repository can be found at the following link:

https://corpus1.mpi.nl/ds/asv/;jsessionid=A0026AAA3C521F75EC5ADF8C93354297?0.

Finally, COST has made it possible for the Blueprint to be freely available to everyone as an open-access publication.

It is important to highlight that the new research project SIGN-HUB (2016–2020) funded by the Horizon2020 program of the European Commission has as one of its goals to implement the Blueprint to write on-line grammars of the following sign languages: DGS, LIS, LSE, LSC, NGT, and TİD. This will make it possible to have the grammatical descriptions directly online and available to everyone once they have been validated.

The social dimension of the Blueprint

When we started the SignGram COST Action, we were motivated by scientific questions, since we are linguists. However, as is often the case for linguists working on neglected and ostracized languages (and sign languages still belong to this category!), we also had in mind a social dimension. This is what we wrote in the application we submitted to COST in 2010:

"Despite significant advances, linguistic knowledge of languages in the visuo-gestural modality is still sketchy and incomplete. This becomes an unsurmountable handicap when inclusive educational policies are proposed, as no reliable grammatical descriptions are available that could constitute the appropriate basis for curriculum development and teaching materials in bilingual-bicultural programmes, sign language (SL) teaching or SL interpreter training. As a result, the responsibility of describing the basic aspects of SLs for educational practices has been frequently left in the hands of teachers of the deaf, language therapists or SL teachers and interpreter trainers, who understandably often lack the required background. Only the best possible education in their SL, though, does guarantee personal development and full exercise of civil, linguistic and ultimately human rights for deaf signing individuals. This action aims to provide scientifically reliable tools in order to meet the broader societal challenge of ensuring equal rights for deaf signers across Europe, as expressed in several international legal initiatives (cf. Resolutions of the European Parliament in 1988 and 1998, Motion of the Council of Europe for the protection of sign languages 2001, UN Convention on the Rights of Persons with Disabilities 2006)."

At the end of the Action, we did create what we think is a scientifically reliable tool for writing grammars of sign languages. It is offered as a contribution to all those interested in setting out to accomplish this task. We hope that even when a grammar writer disagrees with some of our choices, this will be because the approach that we have adopted has advanced the discussion on how to study, describe, and ultimately reinforce the status of sign languages.

Notational conventions

Following common conventions, sign language examples are glossed in English SMALL CAPS. Glosses that appeared in a different language in the source reference have been translated to English. Moreover, the following notational conventions are used:

₁ SIGN ₃	Subscript numbers indicate points in the signing space used in verbal agreement and pronominalization. We use subscript '1' for a sign
	directed towards the body of the signer, '2' for a sign directed towards
	the addressee, and '3' for all other loci (can be subdivided into '3a',
	'3b', etc.).
$INDEX_3 / IX_3$	A pointing sign towards a locus in space; subscripts are used as explained above.
SIGN++	indicates reduplication of a sign to express grammatical features such as plural or aspect.
SIGN^SIGN	indicates the combination of two signs, be it the combination of two independent signs by compounding or a sign plus affix combination.
SIGN-SIGN	indicates that two words are needed to gloss a single sign.
S-I-G-N	represents a fingerspelled sign.

Lines above the glosses indicate the scope (i.e. onset and offset) of a particular non-manual marker, be it a lexical, a morphological, or a syntactic marker. Some of the abbreviations refer to the form of a non-manual marker while others refer to the function:

/xxx/	lexical marker: a mouth gesture or mouthing (silent articulation of a spoken word) associated with a sign; whenever possible, the phonetic form is given;
top	syntactic topic marker: raised eyebrows, head tilted slightly back;
<u>wh</u>	syntactic wh-question marker, often lowered eyebrows;
y/n	syntactic yes/no-question marker: raised eyebrows, forward head tilt;
neg	syntactic negation marker: side-to-side headshake;
<u>re</u>	raised eyebrows (e.g. topic, yes/no-question);
<u>hs</u>	headshake;
cd	chin down;
wr	wrinkled nose;
r	relative clause;
cond	conditional;
<u>bf</u>	body lean forward.

Sign language acronyms

Throughout the Manual, the following abbreviations for sign languages are used (some of which are acronyms based on the name of the sign language used in the respective countries):

ABSL Al Sayyid Bedouin Sign Language
AdaSL Adamorobe Sign Language (Ghana)

ASL American Sign Language
Auslan Australian Sign Language
BSL British Sign Language
CSL Chinese Sign Language

DGS German Sign Language (Deutsche Gebärdensprache)

DSGS Swiss-German Sign Language

(Deutsch-Schweizerische Gebärdensprache)
Danish Sign Language (Dansk Tegnsprog)

FinSL Finnish Sign Language
GSL Greek Sign Language
HKSL Hong Kong Sign Language

DTS

HZJ Croatian Sign Language (Hrvatski Znakovni Jezik)

IPSL Indopakistani Sign Language Inuit SL Inuit Sign Language (Canada)

Irish SL Irish Sign Language Israeli SL Israeli Sign Language

ÍTM Icelandic Sign Language (*Íslenskt táknmál*) KK Sign Language of Desa Kolok, Bali (*Kata Kolok*)

KSL Korean Sign Language

LIS Italian Sign Language (*Lingua dei Segni Italiana*) LIU Jordanian Sign Language (Lughat il-Ishaara il-Urdunia) LSA. Argentine Sign Language (*Lengua de Señas Argentina*) Libras Brazilian Sign Language (*Língua de Sinais Brasileira*) LSC Catalan Sign Language (*Llengua de Signes Catalana*) LSCol Colombian Sign Language (Lengua de Señas Colombiana) LSE Spanish Sign Language (Lengua de Signos Española) LSF French Sign Language (*Langue des Signes Française*) LSQ Quebec Sign Language (*Langue des Signes Québécoise*) NGT Sign Language of the Netherlands (Nederlandse Gebarentaal)

NicSL Nicaraguan Sign Language

NS Japanese Sign Language (Nihon Syuwa)

NSL Norwegian Sign Language NZSL New Zealand Sign Language

ÖGS	Austrian Sign Language (Österreichische Gebärdensprache)
RSL	Russian Sign Language
SSL	Swedish Sign Language
TİD	Turkish Sign Language (<i>Türk İşaret Dili</i>)
TSL	Taiwan Sign Language
USL	Uganda Sign Language
VGT	Flemish Sign Language (Vlaamse Gebarentaal)
YSL	Yolngu Sign Language (Northern Australia)

- TÜBİTAK Research Fund, project 111K314: "A model for reference grammars of sign languages: Methods of analysis and description of sign systems in the light of Turkish Sign Language (İsaret dilleri kaynak bilgisi modeli: Türk İsaret Dili ışığında işaret dizgelerini betimleme ve çözümleme yöntemleri)". Beneficiaries: A. Sumru Özsoy (PI), Aslı Göksel, Meltem Kelepir.
- UCC (Professionshøjskolen University College Capital, Denmark) Research Fund, "Diversity and Social Innovation". Beneficiary: Jette Hedegaard Kristoffersen.

The Communication Centre for the Deaf and Hard of Hearing, Reykjavík, is thanked for its support to the work of Rannveig Sverrisdóttir and Jóhannes Jónsson. We are also grateful to Chris Beckmann from Göttingen University for his editorial help at the stage of manuscript preparation and to Gemma Barberà, who, next to her scientific contribution to the project, ran its administration exemplarily. Mattia Donati designed for free some drawings that we used as elicitation materials as well as the SignGram Action logo. Thank you Mattia for your generosity!

Monica Dietl, the director of the COST Association, helped the SignGram Action in difficult administrative turns. We thank her for her support.

List of authors by section

Part 1 Socio-historical background (Roland Pfau, Carlo Geraci & Odd-Inge Schröder)

Part 2 Phonology

Chapter 0 Preliminary considerations (Carlo Geraci)

Chapter 1 Sublexical structure (Onno Crasborn)

Chapter 2 Prosody (Carlo Geraci)

Chapter 3 Phonological processes (Carlo Geraci)

Part 3 Lexicon

Chapter O Preliminary considerations (Brendan Costello)

Chapter 1 The native lexicon (Brendan Costello, Evita Fotinea, Annika Herrmann, Galini Sapountzaki & Rannveig Sverrisdóttir)

Chapter 2 The non-native lexicon (Aslı Göksel & Roland Pfau)

Chapter 3 Parts of speech

- 3.0 Definitions and challenges (Brendan Costello)
- 3.1 Nouns (Brendan Costello, Annika Herrmann & Rannveig Sverrisdóttir)
- 3.2 Verbs (Brendan Costello, Annika Herrmann, Roland Pfau & Rannveig Sverrisdóttir)
- 3.3 Lexical expressions of inflectional categories (Roland Pfau & Annika Herrmann)
- 3.4 Adjectives (Annika Herrmann & Rannveig Sverrisdóttir)
- 3.5 Adverbials (Brendan Costello, Annika Herrmann, Roland Pfau & Rannveig Sverrisdóttir)
- 3.6 Determiners (Lara Mantovan)
- 3.7 Pronouns (Brendan Costello, Annika Herrmann, Roland Pfau & Rannveig Sverrisdóttir)
- 3.8 Adpositions (Annika Herrmann & Rannveig Sverrisdóttir)
- 3.9 Conjunctions (Annika Herrmann & Rannveig Sverrisdóttir)
- 3.10 Numerals and quantifiers (Brendan Costello, Annika Herrmann, Lara Mantovan, Roland Pfau & Rannveig Sverrisdóttir)
- 3.11 Particles (Brendan Costello)
- 3.12 Interjections (Annika Herrmann & Rannveig Sverrisdóttir)

Part 4 Morphology

Chapter 0 Preliminary considerations (Aslı Göksel)

Chapter 1 Compounding (Aslı Göksel & Roland Pfau)

Chapter 2 Derivation (Roland Pfau & Aslı Göksel)

Chapter 3 Verbal inflection

- 3.0 Definitions and challenges (Aslı Göksel & Roland Pfau)
- 3.1 Agreement (Roland Pfau & Carlo Geraci)
- 3.2 Tense (Roland Pfau, Athanasia-Lida Dimou, Evita Fotinea & Galini Sapountzaki)

Chapter 0 0.1 0.2 0.3	Preliminary considerations — 21 What is phonology? — 21 Organization of the Phonology Part — 21 How to use the Phonology Part — 21	

Chapter 1	Sublexical structure — 22
1.0	Definitions and challenges —— 22
1.0.1	What should go into this chapter and what should not? — 22
1.0.2	Methodological challenges —— 22
1.1	Active articulators —— 23
1.1.1	Phonemic handshapes — 24
1.1.1.1	Selected fingers — 24
1.1.1.2	Finger configuration —— 25
1.1.2	Orientation —— 27
1.1.3	The manual alphabet and number signs —— 28
1.1.4	Other active articulators —— 28
1.2	Location — 29
1.3	Movement —— 30
1.3.1	Path movements —— 30
1.3.2	Secondary movements —— 31
1.4	Two-handed signs —— 32
1.4.1	Symmetrical signs —— 33
1.4.2	Asymmetrical signs —— 33
1.5	Non-manuals —— 34
1.5.1	Mouth gestures — 34
1.5.2	Mouthings — 35
1.5.3	Other non-manuals —— 35
Elicitation	materials —— 35
References	 36
Chamten 2	Duranda 27
-	Prosody — 37
2.0	Definitions and challenges — 37
2.0.1	What is prosody? —— 37
2.0.2	Prosodic markers — 38
2.0.3	Methodological challenges — 40
2.0.4	Outline of the chapter — 41
2.1	The lexical level —— 41
2.1.1	Syllable — 41
2.1.2	Foot — 43
2.2	Above the lexical level — 44
2.2.1	Prosodic word — 45
2.2.2	Phonological phrase — 47
2.2.3	Intonational phrase — 47
2.2.4	Phonological utterance — 49
2.3	Intonation —— 49 Interaction —— 50
1.4	mieracnoli — 50

2.4.1	Turn regulation —— 50
2.4.2	Back-channeling —— 51
Elicitation i	materials —— 51
References	— 51
Chapter 3	- •
3.0	Definitions and challenges — 53
3.0.1	What is a phonological process? —— 53
3.0.2	Caveats — 53
3.0.3	Outline of the chapter — 54
3.1	Processes affecting the phonemic level — 54
3.1.1	Assimilation — 54
3.1.2	Coalescence — 55
3.1.3	Movement reduction and extension — 56
3.1.3.1	Without joint shift —— 57
3.1.3.2	With joint shift — 57
3.1.4	Weak hand drop —— 58
3.1.5	Handshape drop — 58
3.1.6	Nativization —— 59
3.1.7	Metathesis — 59
3.2	Processes affecting the syllable —— 60
3.2.1	Epenthesis —— 60
3.2.2	Syllable reduction —— 61
3.2.3	Syllable reanalysis —— 61
3.3	Processes affecting the prosodic word —— 62
3.3.1	Reduplication —— 62
3.3.2	Phonological effects of cliticization and compounding —— 63
3.4	Processes affecting higher prosodic units —— 63
3.4.1	Organization of the signing space —— 63
3.4.2	Differences in "loudness": Whispering and shouting mode —— 64
Elicitation i	materials —— 65

Part 3: Lexicon	
Chapter 0	Preliminary considerations —— 73
0.1	What is the lexicon? —— 73
0.2	Organization of the Lexicon Part — 75
0.3	How to use the Lexicon Part —— 75

Chapter 1	The native lexicon — 76
1.0	Definitions and challenges — 76
1.0.1	What is the native lexicon? — 76
1.0.2	Methodological challenges — 78
1.1	Core lexicon — 79
1.2	Non-core lexicon —— 83
1.2.1	Classifier constructions — 84
1.2.2	Pointing — 85
1.2.3	Buoys — 86
1.3	Interaction between core and non-core lexicon — 86
1.3.1	Lexicalization processes — 87
1.3.2	Modification of core lexicon signs —— 90
1.3.3	Simultaneous constructions and use of the non-dominant hand —— 92
Elicitation	materials — 93
References	s 93
Chapter 2	The non-native lexicon —— 94
2.0	Definitions and challenges — 94
2.0.1	What is the non-native lexicon? —— 94
2.0.2	How to decide whether a particular form is borrowed —— 94
2.0.3	Morpho-phonological marking of borrowed forms —— 95
2.0.4	When should a borrowed form be considered part
	of the lexicon? —— 95
2.0.5	Methodological challenges — 96
2.1	Borrowings from other sign languages — 96
2.2	Borrowings from (neighboring) spoken language —— 97
2.2.1	Calques/loan translations —— 97
2.2.2	Lexicalization of fingerspelling —— 97
2.2.2.1	Initialization — 98
2.2.2.2	Multiple-letter signs —— 100
2.2.3	Mouthing —— 102
2.2.3.1	Full forms —— 102
2.2.3.2	Reduced forms —— 103
2.2.3.3	Mouthing and fingerspelling —— 103
2.2.4	Other marginal types of borrowing —— 103
2.3	Borrowings from conventionalized gestures —— 104
2.3.1	Lexical functions —— 105
2.3.2	Grammatical functions —— 105
Elicitation	materials —— 106
References	5106

Chapter 3	Parts of speech —— 107
3.0	Definitions and challenges —— 107
3.0.1	What are parts of speech? —— 107
3.0.2	Methodological challenges —— 108
3.1	Nouns —— 109
3.1.1	Common nouns —— 109
3.1.2	Proper nouns and name signs —— 112
3.2	Verbs —— 114
3.2.1	Plain verbs —— 114
3.2.2	Agreement verbs —— 115
3.2.3	Spatial verbs —— 116
3.3	Lexical expressions of inflectional categories —— 116
3.3.1	Tense markers —— 117
3.3.2	Aspect markers —— 118
3.3.3	Modality markers —— 119
3.3.3.1	Deontic modality —— 120
3.3.3.2	Epistemic modality —— 121
3.3.4	Agreement markers —— 122
3.4	Adjectives — 124
3.4.1	Attributive adjectives —— 124
3.4.2	Predicative adjectives —— 126
3.5	Adverbials —— 127
3.5.1	Verb-oriented adverbials —— 128
3.5.2	Sentence adverbials —— 129
3.6	Determiners —— 130
3.6.1	Definite determiners —— 132
3.6.2	Indefinite determiners —— 132
3.7	Pronouns —— 134
3.7.1	Locative and demonstrative pronouns —— 134
3.7.2	Personal pronouns —— 135
3.7.2.1	Person —— 136
3.7.2.2	Number —— 137
3.7.2.3	Clusivity —— 138
3.7.2.4	Case —— 139
3.7.2.5	Gender —— 139
3.7.2.6	Honorific pronouns —— 140
3.7.2.7	Logophoric pronouns —— 140
3.7.3	Possessive pronouns —— 141
3.7.4	Reflexive and reciprocal pronouns —— 142
3.7.5	Interrogative pronouns —— 142
3.7.6	Relative pronouns —— 143

xlviii — Contents

3.7.7	Indefinite pronouns —— 144	
3.8	Adpositions —— 144	
3.8.1	Manual adpositions —— 144	
3.8.2	Adpositions and spatial relations —— 145	
3.9	Conjunctions — 146	
3.9.1	Coordinating conjunctions —— 146	
3.9.2	Subordinating conjunctions — 146	
3.9.3	Correlative conjunctions —— 148	
3.10	Numerals and quantifiers —— 148	
3.10.1	Numerals —— 148	
3.10.1.1	Cardinal numerals —— 149	
3.10.1.2	Ordinal numerals —— 150	
3.10.1.3	Distributive numerals —— 151	
3.10.2	Quantifiers —— 151	
3.11	Particles —— 152	
3.11.1	Negative particles —— 152	
3.11.2	Question particles —— 153	
3.11.3	Discourse particles —— 154	
3.12	Interjections —— 155

Part 4: Morphology

Chapter 0	Preliminary considerations —— 167
0.1	What is morphology? —— 167
0.2	Organization of the Morphology Part —— 168
0.3	How to use the Morphology Part —— 168
Chapter 1	Compounding —— 169
1.0	Definitions and challenges —— 169
1.0.1	What is a compound? —— 169
1.0.2	Types of compounds —— 170
1.0.3	Methodological challenges —— 171
1.1	Native compounds —— 172
1.1.1	Sequential compounds —— 172
1.1.1.1	Semantic structure — 172
1.1.1.1.1	Endocentric compounds —— 173
1.1.1.1.2	Exocentric compounds —— 173

1.1.1.2	Syntactic structure — 174
1.1.1.2.1	Subordinate compounds — 174
1.1.1.2.2	Coordinate compounds —— 175
1.1.1.3	Compounds involving SASS — 176
1.1.2	Simultaneous and semi-simultaneous compounds — 177
1.1.2.1	Simultaneous compounds —— 178
1.1.2.2	Semi-simultaneous compounds —— 180
1.2	Loan compounds —— 181
1.2.1	Faithful loans —— 181
1.2.2	Modified loans —— 182
1.3	Compounds with fingerspelled components —— 183
1.3.1	Sequential — 183
1.3.1.1	Native-like —— 183
1.3.1.2	Loan-like —— 183
1.3.2	Simultaneous —— 184
1.4	Phonological and prosodic characteristics — 185
1.4.1	Phonological characteristics —— 185
1.4.2	Prosodic characteristics — 186
Elicitation r	naterials —— 187
References	 188
Chapter 2	Derivation —— 188
2.0	Definitions and challenges —— 188
2.0.1	What is derivation? —— 188
2.0.2	How is derivation marked? —— 189
2.0.3	Methodological challenges —— 191
2.1	Manual markers of derivation —— 192
2.1.1	Sequential derivation —— 192
2.1.1.1	Agentive —— 192
2.1.1.2	Negative —— 193
2.1.1.3	Attenuative —— 194
2.1.2	Simultaneous derivation —— 195
2.1.2.1	Noun-verb pairs —— 195
2.1.2.2	Attenuative —— 196
2.2	Non-manual markers of derivation —— 196
2.2.1	Diminutive and augmentative —— 197
2.2.2	Intensive —— 198
2.2.3	Proximity —— 198
2.2.4	Noun-verb pairs: mouthings —— 199
Elicitation r	naterials —— 199

- Chapter 11 Register and politeness (Jette Kristoffersen, Andrea Lackner)

5.3. Adjuncts

Some adjectives can also be modified by constituents they do not select. In this case their relation to the adjective is frequently reducible to a causal relation (as in *happy to hear from you*); or to some kind of comparison [syntax- Section 3.6; Semantics-Chapter 8] (as in *red as a tomato*). Here again very little is known for sign languages, and the form, order and restriction of these constituents should be looked at with care.

Chapter 6. The structure of adverbial phrases

6.0. Definitions and challenges

6.0.1. What is an adverbial phrase?

Adverbial phrases are constituents headed by adverbs [Lexicon- Section 3.5], not to be confused with adverbial clauses [Syntax- Section 3.5; Semantics- Section 14.2], which are sentences that are constituents of a complex sentence. Adverbial phrases (in bold in the following examples) are adjuncts, and as such may modify an adjective (a), another adverbial (b), a clause (c) or a verb (d) by providing information regarding the grammatical categories of tense/tense [Semantics- Chapter 1; Morphology- Section 3.2] (yesterday), aspect /aspect [semantics- Chapter 2; Morphology- Section 3.3] (already), and modality/modality [Semantics- Chapter 4;

Morphology- Section 3.4] (*necessarily*, *probably*) or information regarding manner (*proudly*) and place (*here*).

They typically answer questions like how? where? when? how frequently? to what extent?

- a. He was quite clear
- b. The children spoke **very** loudly
- c. John's horse certainly will win the race
- d. John's horse will quickly pace towards the finish line

6.0.2. Classes of adverbs

Adverbials can belong to different categories or classes. Some may modify the meaning of the entire sentence, as in (a) where the adverbial *certainly* refers to the fact that *John's horse will win the race*, while others may just modify a constituent such as the verb in (b), where *quickly* specifies the manner of the event described by the verb (*pace*). Sentential adverbials and VP-adverbials usually occupy different positions in the sentence.

- a. John's horse **certainly** will win the race
- b. John's horse will quickly pace towards the finish line

Sometimes the same adverbial may be used as a sentential adverbial (as in (a) below), or as an adverbial modifying the verb phrase (b).

- a. **Naturally**, she raised many questions
- b. She **naturally** raised many questions

In (a) the adverb *naturally* means 'of course' and modifies the whole sentence, whereas in (b) it modifies just the verb specifying the manner questions were raised, i.e. 'in a natural way'.

Depending on the kind of information they provide, adverbs may be grouped into different classes

6.0.3. Analytical challenges

In spoken languages, adverbial phrases may often contain more than one syntactic element modifying the head of the adverbial phrase, as in the following examples:

a. He climbed the mountain **more quickly**

b. The children walked in the room very awkwardly

Sign languages, however, may express the same meaning without necessarily employing two manual signs. Sign languages may convey complex adverbial phrases by modulating the verb sign in its speed, movement, path and place of articulation. In addition, non-manual markers such as shoulder movement or facial expressions may be the only grammatical markers conveying complex adverbial information.

6.1. Independent manual adverbs

One possibility to convey adverbial information is through an independent dedicated manual sign. In the following example, the sign ON-TIME provides information on the manner in which the action expressed by the verb is carried out.

```
GIANNI ARRIVE ON-TIME
'Gianni arrives on time.'
(LIS, Cecchetto et al. 2006: 949)
```

The grammar developer should identify the manual signs conveying adverbial information as well as their unmarked preferred positions within the sentence. Sometimes besides the unmarked preferred position, other positions are allowed. However, in spoken languages, changes in the position of adverbs within the sentence usually correlate with a difference in prosody [Phonology- Chapter 2] and sometimes, as we saw in the previous section [Syntax- Chapter 6.0.2], with a change in meaning. The grammar developer is therefore advised to verify whether different available positions for an adverbial manual sign correlate with a change in non-manual marking and a change in meaning.

6.2. Modification of manual signs

A second option selected by sign languages for conveying adverbial information is through the modification of manual signs. The sign for the verb may be, for instance, modified in its speed, movement, path and place of articulation to convey manner information. In the following LIS example, the verbal sign WALK is modified in its speed to convey the adverbial information 'quickly'.

Classifier predicates [Morphology- Section 5.1] may also be modified with the same function. In the following LIS example, the classifier predicate

CL-CAR-DRIVING is produced with a zigzag movement to convey information about the manner the action expressed by the classifier predicate is carried out.

Manner and frequency of movement may be modified to convey also aspectual information

The grammar developer should verify any change in the modulation of manual signs from their citation form conveying adverbial information.

6.3. Non-manual adverbs

Many sign languages employing independent manual signs to convey adverbial information may also do so through non-manual adverbials. Sometimes, non-manual markers accompany the adverbial manual sign to intensify its meaning. This is the case of ASL deictic locative signs (corresponding to *there* or *here*) that can be produced with tensed facial expression to convey a high degree of physical proximity, or of temporal signs, like RECENT, whose lexical non-manual marking can be intensified to convey a high degree of temporal proximity.

More often, non-manuals are the only markers conveying adverbial information in the sentence. Specific non-manual markers can convey manner information, as in the following LIS example: the non-manual marking 'mm' produced with closed lips simultaneously to the verbal sign WALK conveys the manner adverb 'quietly'.

```
__mm
DANIELE WALK
'Daniele walks quietly.' (LIS, adapted by Lerose 2009: 51)
```

Non-manual adverbs usually are coextensive with the lexical sign they modify, or may extend over other signs in the case of sentential adverbials.

The grammar developer should identify non-manual adverbials and the spreading domain of non-manual adverbs in the target sign language.

6.4. Classes of adverbs

A broader classification of adverbs regards the domain of the material they modify: while sentential adverbs modify the entire sentence, VP-adverbs modify just the verb.

6.4.1. Sentential adverbs

Sentential adverbs modify the whole sentence conveying the attitude of the speaker/signer towards the content of the sentence.

Probably, Rebecca felt guilty

The sentence below shows a sentential adverb in LIS (CERTAIN) modifying the whole proposition DANIELE COME.

CERTAIN DANIELE COME

'Daniele is certainly coming.'

(LIS, adapted by Lerose 2009: 56)

6.4.2. VP-adverbs

VP-adverbs modify the sentence predicate by adding information regarding the time, manner, place, aspect, and modality of the described event. In the following sections, adverbial phrases are classified according to the type of adverbial information conveyed. We shall take into consideration the main classes of adverbs available crosslinguistically.

6.4.2.1. Temporal adverbs

Temporal [Semantics- Section 14.2.2] adverbs modify the verb by specifying when the event described by the predicate takes place (see tense [Semantics- Chapter 1]). They answer the question *when?*. Among sign languages, tense information is commonly encoded by an independent manual sign, or, in some sign languages, by non-manual markers.

When conveyed by an independent manual sign, time adverbials usually appear sentence-initially, as in the following LSE example.

PAST WEEK MEETING START TEN END QUARTER TO THREE

'Last week the meeting started at ten and ended at a quarter to three'

(LSE, Cabeza Pereiro & Fernández Soneira 2004: 69)

Other sign languages, like ASL, allow their occurrence also in sentence-final position (a) or between the subject and the (modal) verb (b).

a. J-O-H-N BUY CAR TOMORROW

'John will buy a car tomorrow.'

b. J-O-H-N TOMORROW CAN BUY CAR

'John can buy a car tomorrow.'

(ASL, Aarons et al. 1995: 238)

6.4.2.2. Manner adverbs

Manner [Semantics- Section 14.2.4] adverbs specify the way in which an event is takes place. They answer the question *how?*. They are commonly conveyed by modifying the verbal sign, or through non-manual markers. In some cases, they are conveyed by an independent manual sign.

If manner information is encoded in the target sign language by an independent manual sign, the grammar developer should verify its unmarked position in the sentence. In LIS, when an independent manual sign is adopted, it occupies a post-verbal position.

IX-1 LISTEN ANNOYANCE

'I listen to you with annoyance.'

(LIS, Natural 2014: 31)

6.4.2.3. Locative adverbs

This class of adverbs provides information regarding the location where the event takes place. They answer the question *where?*. Locative [Semantics- Section 14.2.3] information is commonly conveyed by an independent manual sign.

If conveyed by an independent manual sign, the grammar developer should verify the position of locative adverbs in the target sign language. According to Lerose (2009), in LIS locative adverbs occupy a post-verbal position.

DANIELE EAT OUTSIDE

'Daniele eats outside.'

(LIS, adapted by Lerose 2009: 54)

6.4.2.4. Adverbs conveying aspectual information

Sign languages often convey aspectual information [Semantics- Chapter 2; Morphology- Section 3.3] through modification of the verb sign.

A continuative [Semantics- Section 2.1.2] action (corresponding to the adverb *continuously*) is marked in ASL by slow (arch-shaped) reduplication of the verbal sign. Iteration of an action (corresponding to the adverb *repeatedly*) is expressed in Swedish Sign Language (SSL) through fast reduplication of the predicate with repeated short movements. Habitual [Semantics- Section 2.1.1] events (corresponding to the adverb

usually) are marked by reduplication of the verbal sign as well, but differ from iterative aspectual information in ASL in that they involve smaller and faster movements.

If the target sign language conveys aspectual information by independent adverbial manual signs, the grammar developer should verify their preferred position in the sentence.

6.4.2.5 Adverbs conveying deontic modality

Deontic adverbs convey the obligatoriness of the action expressed by the sentence predicate (*necessarily*).

A word of caution is needed: deontic adverbs are not to be confused with modal markers expressing deontic modality/modality [Morphology- Section 3.4.1; Semantics-Section 4.2] (*must*, *should*) that sign languages commonly use.

If the target sign language conveys deontic adverbs by independent manual signs, the grammar developer should verify their preferred position in the sentence.

6.4.2.6 Adverbs conveying epistemic modality

Epistemic [Morphology- section 3.4.2; Semantics- Section 4.1] adverbs convey the speaker/signer's attitude towards the truth condition of the proposition (*perhaps*, *certainly*).

If the target sign language conveys epistemic adverbs by independent manual signs, the grammar developer should verify their preferred position in the sentence.

6.4.2.7 Adverbs of degree

Adverbs of degree convey the intensity or degree of a verb (a), adjective (b) or another adverb (c).

- a. Tom couldn't quite understand what was going on
- b. He was **extremely** happy
- c. She spoke very loudly

Sign languages seem to convey degree adverbs by modifying the manual sign they modify (be it a verb, adjective, or adverb) altering its speed and movement and by the employment of non-manual markers rather than using a dedicated manual sign.

In the following LIS sentence, the adverb of degree 'a lot' modifying the verb STUDY is not overtly realized as a independent sign, rather, the sign for the verb is modified in its realization, namely, it is reduplicated (reduplication is indicated by '++'

in the glosses) and produced with longer and wider movements with respect to its citation form.

```
DANIELE STUDY++
'Daniele studies a lot.'
(LIS, adapted by Lerose 2009: 55)
```

If the target sign language conveys adverbs of degree by independent manual signs, the grammar developer should verify their preferred position in the sentence.

6.4.2.8 Adverbs of frequency

Adverbs of frequency specify how often an event takes place (*frequently*, *sometimes*, *seldom*). They answer the question *how often*?.

They partially overlap with adverbs conveying iterative, habitual, and durative aspectual information, but they embrace a broader semantic area. Across sign languages, adverbs of frequency are conveyed by an independent manual sign (a) or by inflecting the verbal manual sign they modify (b).

- a. IX-3 PIZZA IX-3 EAT SOMETIME 'He sometimes eats pizza.'
- b. IX-1 WORK ARRIVE LATE++
 'I always arrive late at work.'

(LIS, Natural 2014: 32)

If the target sign language conveys adverbs of frequency by independent manual signs, the grammar developer should verify their preferred position in the sentence.

6.5. Adverbial phrase modifiers

Adverbial phrases may contain more material than just the head, namely, the adverb. When this happens, the head is modified by the material appearing inside the adverbial phrase.

Adverbs can be modified by degree words expressing intensity or comparison [Semantics- Chapter 8].

6.5.1 Adverbs modified by degree words expressing intensity

When modified by a degree word expressing intensity, in English the adverb is preceded by *very*, *so*, *quite*, *too*, *extremely*, *incredibly*, etc., as in the following example:

John was walking too quickly

No specific studies on the modification of an adverb by a degree word expressing intensity are at the moment available in sign languages.

6.5.2 Adverbs modified by degree words expressing comparison

Adverbs may undergo comparison by being modified by degree words expressing comparison in their comparative and superlative forms. When undergoing comparison, in English the adverb is preceded by *more/less* or *most/least* yielding the adverbial phrase *more/less quickly*, *most/least quickly*.

No studies on comparative and superlative degree words modifying an adverb are at the moment available in sign languages.

Elicitation Materials

Since the production of adverbial clauses is not frequent in spontaneous conversation, the grammar developer is advised to use elicitation techniques such as situational context he/she should sign to the informant followed by questions aiming at eliciting adverbial phrases. To exemplify, after presenting the context in (i), the informant can be asked the question in (ii).

- (i) You have a job meeting at 9. It's 8:45 and you are still at home. The job meeting is half an hour away, walking distance, from your place.
- (ii) How are you walking to get there on time?

Another elicitation technique involves asking grammaticality judgments. It is however advisable to use grammaticality judgments after eliciting the data through situation contexts, just to verify the position(s) adverbial manual signs occupy in the sentence.
